                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           207 ISEFYLSDCNVTSRPCKYKLKKSTNKFCVTCENQAPVHFVGVGSC 251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indels
Sequence 59, Application US/08875811
Patent No. 6645793
GENERAL INFORMATION:
APPLICANT: Rybak, Susanna M.
APPLICANT: Newton, Dianne L.
APPLICANT: Modawer, Alexander
TITLE OF INVENTION: Recombinant Ribonuclease Proteins
NUMBER OF SEQUENCES:
ADDRESSEE: Townsend and Townsend and Crew LLP

pancreatic ribonuclease - common iguana

ama the

```
pancreatic ribonuclease (EC 3.1.27.5) - minke whale
N.Alternate names: RNase 1, RNase A
N.Alternate names: Rase 1; RNase A
S.Species: Balaenoptera acutorostrata (minke whale, lesser rorqual)
C.Species: 24.Apr-1984 #sequence_revision 24.Apr-1984 #text_change 03-Jun-1994
C.Accession: A00818
M.; Welling, G.W.; Beintema, J.J.
Biochem. J. 157, 317-323, 1976
A.Fithe: The amino acid sequence of pike whale (lesser rorqual) pancreatic ribonuclease.
A.Reference number: A00818; MJID:76277855; PMID:962870
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A;Accession: A00821

Pancreatic ribonuclease (EC 3.1.27.5) - capybara
NyAlternate names: RNase 1; RNase A
C;Species: Hydrochaeris Nydrochaeris (capybara, carpincho)
C;Date: 03-Aug-1984 #sequence_revision 03-Aug-1984 #text_change 29-Oct-1999
C;Accession: A00824
R;Bebittema, J.G.; Neuteboom, B.
G;Mol. Evol. 19, 145-152, 1983
A;Title: Origin of the duplicated ribonuclease gene in guinea-pig: comparison of the ami A;Accession: A00824
A;Accession: A00824
A;Accession: A00824
A;Accession: A00824
C;Beridues: 1-128 cBEI>

Mol. Biol. 283:231-244(1998)..., J. Mol. Biol. 283:231-244(1998)..., Feferentially cleaves single-stranded RNA at pyrimidine -: FUNCTION: Preferentially cleaves single-stranded RNA at pyrimidine as substrates, and prefers the former. The S-lectins in frog eggs may be involved in the fertilization and development of the frog embryo. This lectin agglutinates various animal cells, including normal lymphocytes, erythrocytes, and fibroblasts of animal and human origin. It is cytotoxic against several tumor cells.

                                                                                                                                                                                                                                                                                        J. Biochem. 106:729-735(1989).
-!- CATALYTIC ACTIVITY: Endonucleolytic cleavage to nucleoside: phosphatrac and 3'-phosphocligonucleotides ending in C-P or U with 2',3'-cyclic phosphate intermediates.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the pancreatic ribonuclease family. PIR; JX0085, 7X0085.
HSSP: P11916; 1864.

 -!- CATALYTIC ACTIVITY: Endonucleolytic cleavage to nucleoside 3'-phosphates and 3'-phosphooligonucleotides ending in C-P or U-P with 2', 3'-cyclle phosphate intermediates.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Pancreas.
-!- SIMILARITY: Belongs to the pancreatic ribonuclease family.

Mol. Biol. Evol. 19:438-445(2002).

-1- FUNCTION: May function as a tRNA-specific ribonuclease that binds to actin on the surface of endothelial cells; once bound, angiogenin is endocytosed and translocated to the nucleus, thereby promoting the endothelial invasiveness necessary for blood vessel formation. Angiogenin induces vascularization of normal and malignant tissues. Abolishes protein synthesis by specifically hydrolyzing cellular tRNAs (By similarity).

-1- SUBCELLULAR LOCATION: Secreted.

-1- SIMILARITY: Belongs to the pancreatic ribonuclease family.
                                                                                                                                                                                                                                                                                                    ---PCKYKLKKS

J. 157:317-323(1976).
-!-CATATYTIC ACTUATY: Endonucleolytic cleavage to nucleoside 3'-
phosphates and 3'-phosphooligonucleotides ending in C-P or U-P
with 2',3'-cyclic phosphate intermediates.
-! SUBCENIUIAR LOCATION: Secreted.
-! TISSUE SPECIFICITY: Pancreas.
-!- SIMILARITY: Belongs to the pancreatic ribonuclease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Emmens M., Welling G.W., Beintema J.J.; "The amino acid sequence of pike-whale (lesser-rorqual) pancreatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Balaenoptera acutorostrata (Minke whale) (Lesser rorqual).

Mol. Biol. Evol. 19:438-445(2002).

-!- FUNCTION: May function as a tRNA specific ribonuclease that binds to actin on the surface of endothelial cells; once bound, angiogenin is endocytosed and translocated to the nucleus, thereby promoting the endothelial invasiveness necessary for blood vessel formation. Angiogenin induces vascularization of normal and malignant tissues. Abolishes protein synthesis by specifically

-!- FUNCTION: May function as a tRNA-specific ribonuclease that binds
-!- FUNCTION: May function as a tRNA-specific ribonuclease that binds
to actin on the surface of endothelial cells, once bound,
anglogenin is endocytosed and translocated to the nucleus, thereby
promoting the endothelial invasiveness necessary for blood vessel
formation. Anglogenin induces vascularization of normal and

for e.g. New recombinant ribonucleases, used for killing target cells, treating cancers, viral infections or autoimmune diseases.

Claim 4; Page 59; 71pp; English.

The present sequence is a recombinant Rana pipiens ribonuclease protein

```
;
0
(RaPLRI) with Met at position 1 attached to (His)6 tag and Met24Leu. Carboxy terminal end of recombinant RaPLRI has a covalently bound ligand binding moiety, which can be a LL2 antibody directed against CD22 on cancerous B cells or human chorionic gonadotrophin (hCG) effective against Kaposi's sarcoma cells. Recombinant ribonucleases can be expressed in bacteria without an N-terminal methionine due to the presence of a signal peptide that is cleaved by bacteria. The soluble expression of ribonuclease allows the proteins to be fused in-frame with used for treatment of cancer and autoimmune diseases
                                                                                                                                                                                                                             09

```

The present sequence is a recombinant Rana pipiens ribonuclease (RaPLR1) protein with Met at position 1. Carboxy terminal end of recombinant RaPLR1 has a covalently bound ligand binding moiety, which can be a LL2 antibody directed against CD22 on cancerous B cells or human chorionic

New recombinant ribonucleases, used for killing target cells, e.g. for treating cancers, viral infections or autoimmune diseases.

                                                                                                                                                                                                                                                                      1 MQDWLTFQKKHLTNTRDVDCNNIMSTNLFHCKDKNTFIYSRPEPVKAICKGIIASKNVLT 60
gonadotrophin (hCG) effective against Kaposi's sarcoma cells. Recombinan ribonucleases can be expressed in bacteria without an N-terminal methionine due to the presence of a signal peptide that is cleaved by bacteria. The soluble expression of ribonuclease allows the proteins to be fused in-frame with ligand binding moleties to form cyclotoxic fusion proteins. They can be used for treatment of cancer and autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a recombinant Rana pipiens ribonuclease (RaPLR1)

Carboxy terminal end of RaPLRI has a covalently bound ligand binding moiety, which can be a LL2 antibody directed against CD22 on cancerous B cells or human chorionic gonadotrophin (hCG) effective against Kaposi's Sarcoma cells. Recombinant ribonucleases can be expressed in bacteria without an N-terminal methionine due to the presence of a signal peptide that is cleaved by bacteria. The soluble expression of ribonuclease allows the proteins to be fused in-frame with ligand binding moieties to form cytotoxic fusion proteins. They can be used for treatment of cancer and autoimmune diseases

The present sequence is a recombinant Rana pipiens ribonuclease (RaPLR1) protein with Met at position 1 and Gln2Ser. Carboxy terminal end of recombinant RaPLR1 has a covalently bound ligand binding moiety, which can be a LL2 antibody directed against CD22 on cancerous B cells or human chorionic gonadotrophin (hCG) effective against Kaposi's sarcoma cells. Recombinant ribonucleases can be expressed in bacteria without an N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     terminal methionine due to the pressed in bacteria without an Nicleaved by bacteria. The soluble expression of ribonuclease allows to proteins to be fused in-frame with ligand binding moieties to form cytotoxic fusion proteins. They can be considered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           e.g.

                                                                                                            g
                                                                                                                                                                                                              The present sequence is a Rana pipiens Clone 5alb ribonuclease (RaPLRI). It is encoded by Clone 5alb cDNA obtained from Rana pipiens liver mRNA library. It exhibits differences with Oncoase (FTM) at amino acid residues 11, 20, 85 and 103. Carboxy terminal end of RaPLRI has a covalently bound ligand binding moiety, which can be a LL2 antibody glarected against CD22 on cancerous B cells or human chorionic gonadotrophin (hCG) effective against Kaposi's Sarcoma cells. Recombinant ribonucleases can be expressed in bacteria without an N-terminal methionine due to the presence of a signal peptide that is cleaved by bacteria. The soluble expression of ribonuclease allows the proteins to be fused in-frame with ligand binding moieties to form cyclockic fusion proteins. They can be used for treatment of cancer and autoimmune

Carboxy terminal end of recombinant RaPLRI has a covalently bound ligand binding moiety, which can be a Li2 antibody directed against CD2 on cancerous B cells or human chorionic gonadotrophin (ROG) effective against Kaposi's sarcoma cells. Recombinant ribonucleases can be expressed in bacteria without an N-terminal methionine due to the presence of a signal peptide that is cleaved by bacteriar. The soluble expression of ribonuclease allows the proteins to be fused in-frame with ligand binding moieties to form cytocoxic fusion proteins. They can be used for treatment of cancer and autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               62

AAW35115 to AAW35123 encode recombinant proteins (rOnc) which are modifications of the RNase Onconase (RTW) (nOnc). Such novel ribonuclease molecules are highly cytotoxic and can be used alone or to form chemical conjugates or to target recombinant immunofusions. They are used for cell separation in vitro by selectively killing unwanted types of cells, e.g. in bone marrow prior to transplantation into a patient undergoing marrow ablation by radiation, or for killing leukaemia cells or T-cells that would cause graft versus host disease. The toxins can also be used increased cytotoxic activity compared to nonc and also lower immunogenicity in humans
                                                                                                                                                                                                                                                                                      Ribonuclease molecules based on native Onconase - used for killing cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MQDWLTFQKKHLTNTRDVDCNNILSTNLFHCKDKNTFIYSRPEPVKAICKGIIASKNVLT

This is one of two preferred proteins (the other in AAW06543) that have been isolated from Rana pipiens occytes. Both proteins have a blocked amino terminal group and are essentially free of carbohydrates. The proteins are used to treat tumours. Use of the peptides has fewer disadvantages than chemotherapy, radiotherapy and surgery in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                     This sequence represents recombinant frog Onconase. Onconase has ribonuclease and anti-tumour activity. The CDNA was produced via PCR (using primers AAZ19769) of two synthetic DNAS whose sequences encoded most of the N-terminal or the C-terminal amino acids (minus the initial methionine) or the C-terminal 54 amino acids (minus the initial methionine) or the C-terminal 51 amino acids, and were ligated in frame at an Nrul site. The CDNA was then subcloned into a vector e.g., pBluescript, where the ATG initiation codon subcloned into a vector e.g., pBluescript, where the ATG initiation codon subcloned into a vector e.g., pBluescript, where the ATG initiation codon to the CDNA. After expression in E. coli, into recombinant crot protein was purified. The initial N-formyl methionine was cleaved off and the now N-terminal glutamate residue cyclised to form an N-terminal glutamate residue cyclised to form an N-terminal compassion in E. coli, the recombinant of the phosphate of phosphate by proglutamate is als North color both ribonuclease and anticumour activity. Onconase is a 12 No ribonuclease which causes cell death as a result of potent inhibition of protein synthesis by a mechanism involving inactivation of collular RNA. It is not inhibited by mammalian placental ribonuclease inhibitor, which may explain its continuity against a variety of solid tumours e.g. colon or pancreatic cancers, and can be used alone or in combination with other anti-cancer agents such as tamoxifen. When used as an anti-tumour agent, Onconase can be conjugated to a marker which targets it to a specific cell type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MQDWLTFQKKHLTNTRDVDCNNILSTNLFHCKDKNTFIYSRPEPVKAICKGIIASKNVLT 60

Sequences AAW35125 to AAW35135 represent recombinant fusion proteins (rOnc) which are modifications of the RNase Onconase (RTM) (nOnc). Such movel ribonuclease molecules are highly cytotoxic and can be used alone or to form chemical conjugates or to target recombinant immunofusions. They are used particularly for decreasing tumour cell growth. They can also be used for cell separation in vitro by selectively killing unwanted types of cells, e.g. in bone marrow prior to transplantation into a patient undergoing marrow ablation by radiation, or for killing leukaemia cells or T-cells that would cause graft versus host disease. The toxins can also be used to selectively kill unwanted cells in culture. The new ribonucleases have increased cytotoxic activity compared to nonc and also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   251 MEDWLIFPQKKHITNTRDVDCDNIMSTNLFHCKDKNTFIYSRPEPVKAICKGIIASKNVLT 310

or to form chemical conjugates or to target recombinant immunofusions. They are used particularly for decreasing tumour cell growth. They can also be used for cell separation in vitro by selectively killing unwanted types of cells, e.g. in bone marrow prior to transplantation into a patient undergoing marrow ablation by radiation, or for killing leukaemia cells or T-cells that would cause graft versus host disease. The toxins can also be used to selectively kill unwanted cells in culture. The new ribonucleases have increased cytotoxic activity compared to nonc and also

as - nseful Recombinant Onc protein with glutamine residue at position 1 - antitumour and antiviral agent, also as cell culture selection

Claim 1; Page 28; 35pp; English

This sequence represents a recombinant Onc protein comprising a 104 amino acid sequence having Gln at position 1. Onc, a ribonuclease from Rana pipiens cocytes, is known as an antitumour agent (e.g. for treating pancreatic cancer) and inhibitor of human immunodeficiency virus type-1 replication. It can be used therapeutically or as a cell-culture

ö The present sequence represents a frog ribonuclease protein (ranpirnase) (RNase). The specification describes a synthetic ribonuclease protein, in which the addition of cysteine in the ribonuclease facilitates the chemical linking of a targetine molecule by the single reactive sulfhydryl group. The specification also describes a method for the production of ranpirnase using DNA technology instead of processing biological material. The re-engineering of the protein molecule allows easier attachment to a targeting molecule thereby making it possible for the ribonuclease to be delivered to a particular cell receptor where it Gaps Length 104; 93.0%; Score 543; DB 4; Length 10 93.3%; Pred. The method of the invention involves subjecting pETIId-ronc(QI,M23L) plasmid DNA to two different site-directed mutations, each using overlapping PCR protocol. The method is useful for constructing an isolated nucleic acid encoding the ribonuclease. The present amino acid sequence represents the northern leopard frog rampirnase protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 QDWLTFQKKHITNTRDVDCDNIMSTNLFHCKDKNTFIYSRPEPVKAICKGIIASKNVLTT 60
